Hypothetical City Workbook III: Exercises And GIS Data To Accompany Urban Land Use Planning, Fifth Edition (No. 3)

Synopsis

Suitable to guide the user through the formulation of the components of a future land use plan, this workbook provides experience with the application of GIS technology for land analysis at various scales. It takes the user through the process of working with factual land use, population and socio-economic data.

Book Information

Paperback: 136 pages

Publisher: University of Illinois Press; 5th edition (April 10, 2006)

Language: English

ISBN-10: 0252073460

ISBN-13: 978-0252073465

Product Dimensions: 8.5 x 0.4 x 11 inches

Customer Reviews

This workbook is designed to guide the user through the formulation of the components of a future land use plan. It provides hands-on experience with the application of GIS technology for land analysis at various scales; guides the user through the process of working with factual land use, population and socio-economic data; as well as assessing land use policies to formulate alternative land use plans and designs. The workbook also includes a special CD containing GIS data files. New to this edition are many additional illustrative images, GIS exercise instructions written for ArcGIS with useful screenshots to facilitate the completion of exercises, and revised and new data sets on CD (including parcels, roads, water and sewer service boundaries, and streams). This new edition also includes updated and new exercises for identifying issues and constructing scenarios; communitywide land use design; creating a small area plan; land supply and demand acreages via generalized land use categories, and the plan quality evaluation protocol. The exercises in this workbook are designed to complement *Urban Land Use Planning, 5th Edition*, but may also be used on their own in city planning, geography, and urban studies courses. good condition

I have used the Hypo-City workbook in my Land Use and Growth Management course at the University of Virginia for several years. What I like about the workbook is that it is based on GIS layers and approaches plan making as a logical series of layered rounds reflected in eight exercises. These can be used selectively - I use four of them and actually use several texts rather than Urban Land Use Planning. Students/instructors can customize the exercises to emphasize particular issues or to partially replicate a real community. Students work in teams and welcome this applied addition to course readings and lectures. I have developed a modification to highlight the issue of exurban sprawl and would be happy to share that with anyone who is interested. Contact me at dotson@virginia.edu.
