Written by two pioneering experts in the field with a combined experience of over 20,000 MRI studies of veterinary patients. Suitable for small animal veterinarians and veterinary students. Ian Elliott trained as a Radiographer and first became involved with MRI in late 1980s. He has worked exclusively in MRI since 1991 and, following an extensive spell scanning human patients, helped pioneer the use of the technique in veterinary practice. Ian has been involved exclusively in veterinary MRI since 2000 and has scanned many thousands of cases during this time. He currently works for Burgess Diagnostics providing MRI services to veterinary surgeons throughout UK and Ireland. Geoff Skerritt is an RCVS Recognised Specialist in Veterinary Neurology, Diplomate of the European College of Veterinary Neurology and former President of the ECVN. In 1997 Geoff was one of the founders of VetMRI, the first mobile veterinary MRI facility in Europe. He is the founder and director of ChesterGates Animal Referral Hospital, a leading multi-discipline veterinary referral centre in the UK.

Mesmo sendo um livro de bolso, para consultas rápidas, este livro aborda o conteúdo de maneira incompleta, ficando a impressão de que o autor tentou preencher o livro com o básico e que faltou assunto para isso. O livro trata da física e teoria do conteúdo como todo e qualquer outro autor, seja de humanos ou veterinária, e nos capítulos seguintes perdeu-se em uma aparente falta de assunto. Não há posicionamento, uso correto de bobinas, parâmetros de imagem, equipamentos disponíveis. O atlas de referência anatômica é sofrível e com legenda confusa e de difícil consulta. É um livro regular, que mereceria maior carinho em futuras edições.

In our practice we need to do more MRI's everyday and there is nobody to teach us so we have to learn on our owns for every case we have.In this book you can find everything you need.
