WHY DO HUMANS HAVE TUMOURS AND CORONARY HEART DISEASE, BUT GOATS DO NOT?

WHY DO HUMANS HAVE
TUMOURS AND
CORONARY HEART
DISEASE, BUT GOATS
DO NOT?

Željko Grabarević & Ivo Rotkvić

ISBN 978-953-56091-0-0

Synopsis

The book describes the most important features and pathogenesis of the two most important human diseases (tumors and coronary heart disease) and compares them with the same diseases in animals. Special emphasis is on the goat physiology and pathology concerning the fact that this species is almost free of tumors and atherosclerosis. Comparative pathology of the various diseases in man and animals is in the scope of the one medicine concept or world health initiative which is one of the most important initiatives in modern medicine. Besides pathogenesis and morphology of the tumors and atherosclerosis, the most important risk factors like genetic, nutrition, stress, and viral infections are described in a such a way that it can be understandable not only for medicine doctors and veterinarians but also for anybody who wish to know more about this two most important human diseases in nowadays.

Customer Reviews

I have not finished reading this yet so I can only comment on part of it. I have goats and so that is what first caught my eye. I am also health conscious and thought it would be an interesting read. I

bought the kindle version and the only problem with that is that I am reading it on my notebook computer and I can enlarge the page so the print is easier to read but the scanned graphics don't enlarge with it and some are very very hard to read. So my suggestion is to NOT buy the kindle version but get the book so that the graphics (charts and artwork) are easier to read.

because goats dont live as long as humans so they die of other causes. like we used to. But all animals are capable of getting tumors and older ones do die of them. just no one gives them pet scan or cabg to work these things up tumor we are exposed to more carcinogens, have a much larger species population and dense for viruses to develop and live longer cad high fat and high calorie diet plus living long tumors cannot be eradicated as a phenomenon as it preserves the biodiversity of our planet. you live to 90 and die of a car crash you are most likely going to have some innocuous tumor somewhere for CAD your engine is gonna have buildup after so many miles, u cant realistically prevent any fatty layer from developing even in 100 years without some adverse effects that would prohibit its use in gen pop eat 1200-1400 calories a day if u want to buy a few years at the end if u want though
