## Customer Reviews

"The authors are to be congratulated on the publication of what must be one of the most significant and remarkable contributions to the literature on veterinary dermatology and dermatopathology. The short conclusion from this book review is simple: if you are in any way serious about veterinary dermatology, you must buy this book." R. Bond, *Veterinary Dermatology*, 2006 "Every dermatologist and veterinary pathologist in the world should own this book. It provides a unique resource for anyone who wants a definitive description of the clinical and histopathological features of all the skin

diseases we currently know about." *Veterinary Times*, 2005 "An excellent book. The illustrations are superb and the descriptions that accompany them are in straightforward English. It stems from the authors' broad practical experience which will aid even experienced clinicians and pathologists. I recommend this book to all veterinary dermatologists and pathologists. All trainees should have a copy and ownership should be compulsory for all dermatopathologists." *J Rest, Veterinary Dermatology*, 2005 "The authors have written a well organised and complete review of the clinical signs and histopathologic lesions observed in all of the included skin diseases of the dog and cat. It is the most thorough and practical work available to the clinician and pathologist at this time." *Dr L. D. McGill, Veterinary Pathology*, 2006 "This book offers a magnificent clinical and histopathological description of all the non-neoplastic skin diseases and neoplastic skin tumors of dogs and cats known at the beginning of the 21st Century. Every general practitioner interested in dermatology, every histopathologist interested in the skin and even more so, every dermatologist and dermatopathologist should have this book, a masterpiece, permanently to hand." *European Journal of Companion Animal Practice*, 2006 "A superb book that more than fulfils its premise. It fills a void in the dermatology literature and will become a definitive resource." *Journal of Small Animal Practice*

Fabulous book to consult about dermatopathology. Easy to read and to understand. highly recommended. The only downside of it is that the histo and gross images are black and white. However, the histo descriptions are good enough to get the point.

As advertised.

This book is essential for any resident in anatomic veterinary pathology. I never used this book in veterinary school, but if you plan to specialize in path or derm this book is very helpful. I don't care much for how the book is organized, especially the index. For example, if you don't know what a disease is called (and new pathology residents will not know at least half of the conditions described in this book) you will have a really hard time looking up the information by the skin changes. On more than one occasion I found myself flipping through the pictures until I found something like my specimen and then go from there to get the diagnosis. On the other hand, this book is easy to read and the authors take time to explain how to differentiate x from y and they even give you a list of differentials for the condition. The number of black and white photos are also disappointing for a 2005 book. The book is expensive (overpriced in my opinion). A 2005 book should at least have online consultation or a CD version of the book for computer use. It would be so easy for the publishers to put color photos on CD if printing in color is not cost effective.

Working vets and any college-level holding strong in advanced veterinary science must have *Skin Diseases of the Dog and Cat: Clinical and Histopathologic Diagnosis*, now updated to its second edition and including black and white and color photos to aid in diagnosis and treatment. From close-up photos of skin conditions to detailed treatment analysis and procedures, this is a working reference any vet must have; particularly as skin diseases are the most common complaint bringing a dog or cat owner into the vet's office.
