# Ghost Fleet: The Sunken Ships Of Bikini Atoll

## Synopsis

In 1946, the United States began a series of nuclear tests on Bikini Atoll to determine the impact of atomic bombs. Delgado, a noted marine archaeologist with the National Park Service, visited Bikini in the late 1980s to explore and document the condition of the sunken ships. His work is more than an archaeological study; it is the history of the nuclear age. This book chronicles the development of the bomb, its deployment in Japan, the preparations for the tests, the attempted clean-up afterward, and the beginning of the Cold War.

In 1946, the United States began a series of nuclear tests on Bikini Atoll to determine the impact of atomic bombs on armored naval ships. Amid much fanfare, the military assembled a fleet of surplus ships from World War II, carefully mooring them in the lagoon, and exploded nuclear bombs both in the air and under the water. Delgado, a noted marine archaeologist with the National Park Service, visited Bikini in the late 1980s to explore and document the condition of the sunken ships. His work is more than an archaeological study; it is the history of the nuclear age. Meticulously researched, it chronicles the development of the bomb, its deployment in Japan, the preparations for the tests, the attempted clean-up afterward, and the beginning of the Cold War. Many of the photographs and diagrams were first published by the National Park Service in a study entitled *The Archaeology of the Atomic Bomb* (1991). A good purchase for public and academic libraries. —John Kenny, San Francisco P.L. Copyright 1996 Reed Business Information, Inc.

Good history!!

As agreed

My Dad was there (USS Reclaimer) - swimming in the atoll the day after the blasts, cleaning refuged ships, etc. It's amazing he's still alive. Nice photos; good summaries. This isn't a full-blown account of Operation CrossRoads but a nice summary of the ships. If you are interested in OC, this is a good book to have on your shelf.

Nice book to research prior to diving there. Nice reference for those interested in the history. Plenty of wartime details and the after effects of atomic testing

James Delgado does a very good job of reviewing the sunken ships of Bikini Atoll and telling the story of the 1946 atomic bomb tests. I read this book after diving at Bikini Atoll and found it to be a good treatment of a topic that has received too little attention. As far as wreck diving goes, Bikini Atoll is the best in the world, and my only disappointment with this book is that it does not fill the need for a coffee-table-style photographic survey of the incredible shipwrecks at Bikini. That being said, Delgado's book is a nice compromise between such a coffee table book and the more comprehensive historical treatment in Jonathan Weisgall's superb book on Bikini Atoll.

This is a great mini-coffee table book (get the hardcover if you REALLY dig this stuff!) offering hours of information and photos of the famous atomic bomb tests on naval ships at Bikini Atoll. The 190 page book is broken into nine chapters and has excellent notes on sources. Background information covers the first half of the book while the second is focused on recent dives to many of the famous and lesser known ships that were sunk here. The writing is very informative and the photographs are absolutely haunting, particularly the ones of the aircraft carrier USS Saratoga! Several color photos are included in the center. The author pushes no agenda in this book. He merely reports the facts available both "good and bad".

Having lived in the Marshall islands and dove the wrecks at Bikini I appreciated the history, photos and accounts presented in this book. The author does a great job of research on the ships & the crews, but makes a laughable conclusion that racism was the primary goal when placing the ships in the target area with regards to the German cruiser Priz Eugen and the Captured Japanese vessels which mars this otherwise good historical account.

This book presents an illuminating look at the nuclear testing and it's aftermath. The cavalier attitude towards radiation is pretty amazing. There are also many fine pictures of the wrecks underwater, including some shots of the world's only existing diveable aircraft carrier.
