Raspberry Pi was originally designed for education purposes. Its inventor, Eben Upton, conceived it as a low-cost device to allow kids to have an affordable and light-weight device to help them hone their skills in programming and the underlying hardware. Thanks to its small size nature and low-cost, it was quickly adopted by vendors, tinkerers and other electronic enthusiasts for launching projects that demanded more than the core micro- controller Today Raspberry Pi is more than just any teaching tool for encouraging kids to learn and enjoy basic hardware skills and programinjg.
