Founded in 1915 as the Cartographic Group, the first division of National Geographic, National Geographic Maps has been responsible for illustrating the world around us through the art and science of mapmaking. Today, National Geographic Maps continues this mission by creating the world's best wall maps, recreation maps, atlases, and globes which inspire people to care about and explore their world.

As an earth scientist, maps are part and parcel of my skill set. And having been formerly employed at Yosemite Nat'l Park and a continued regular visitor, the illustrated trails map was a must have. Having been prepared by National Geographic was icing on the cake. The map is printed on all weather sturdy stock with great colors and in high detail. I can show my grandchildren the many trails I've hiked and share stories of backpacking from Yosemite to Lake Tahoe. Viewing the Yosemite high country is awesome and this map provides suitable info for planning a trip and guiding your hikes.

I really love nat geo's trail maps, this things can hold up really well. I had a stack of them out on this last trip through the southwest. Its not mine if I haven't spilled coffee on it yet apparently well knocked a cup over right on the maps at first I freaked out but after a quick trying and leaving in the sun the maps weren't even phased. As for the map itself, I carry them on all my hikes and haven't been disappointed when i have to use them on the trails. Another thing I use them for is planning my photography shots, it gives me a bigger picture of everything so I know what the terrain looks like, what direction each "viewpoint" is before I ever get to the parks

This was very helpful on our trip to Yosemite. Very Very detailed, probably more so than we needed. If you are just a touristy stick to the popular trails kind of hiker, the free map you get in the park is probably sufficient, but this one is a must if you backpack the back country and hike into the wilderness. Great coating on this map to keep from getting wet. I accidentally wrinkled very badly, and flattened it out and put some heavy weights on it and it was good as new again.

Anytime I go to a National Park, I always get at Nat Geo map. First of all, do not back country hike without a topographical map. My wife and I hiked the Grand Canyon without one, and we nearly missed our first water stop because we couldn't figure out where on our internet printed map we were. Lucky for us, when we did find our water stop there was a guy who lent us his Nat Geo map for the rest of our hike. These maps are detailed, have lots of great information. They are waterproof and extremely durable.

Love NGM maps as they are so detailed and helpful for hiking, etc. Purchase them for all the planned vacations as they are full of information and correspond nicely with hiking books and hiking programs like All Trails.

Purchased this for Yosemite backpack planning and trail use. Have used about six National Geographic Trails maps now for backpacking in different parts of the U.S. Always very helpful. In this case, it would be better if map elevation profiles and information about specific trails were available, but the map would need to be twice as big. So a map for a specific part is required for quick profile info or internet searching. Excellent product.

This is the best Yosemite map out there. I bring it on all my hikes. It's a plastic material, not paper, so it's waterproof and tear-resistant (I'm sure you could tear it if you tried, and you could definitely cut it with scissors, but it shouldn't tear by accident if you don't do anything crazy with it). It's got enough detail but is also packable enough to bring backpacking.

Perfect for planning backpacking trips! Definitely suggest getting the map before looking at trail descriptions as it helps to orient. No complaints about this map whatsoever.
