## Customer Reviews

In discussing the impact of the environmental movement on food and farming, Green also explores controversies surrounding modern agriculture and its distribution practices. A brief history of farming (beginning in 9,000 BCE) quickly leads to a discussion of more recent trends, including high-yield varieties of crops, monoculture, genetically modified foods, pesticides, water management, factory farming, organic farming, fair trade, the food industry, dietary changes worldwide, the control of seeds by transnational corporations, and the impact of global warming on agriculture. Readers looking up particular topics rather than reading the entire book may occasionally be confused by acronyms for organizations (FAO, WWF), which could have been referenced in the glossary or the too-brief index. However, the writing is clear, the approach is balanced, and the text is succinct. Colorful photos and sidebars appear throughout the book, along with the occasional map or graph.

This volume from the Impact of Environmentalism presents a timely topic in a useful, readable way.

Daughter needed this book for school. Arrived quickly. Daughter uses it a lot.

It took 3 weeks for this book to get to my house. That is not okay. Like not at all.
