A Photographic Guide To The Birds Of India: And The Indian Subcontinent, Including Pakistan, Nepal, Bhutan, Bangladesh, Sri Lanka, And The Maldives (Princeton Field Guides)

Synopsis

This is the most comprehensive photographic guide to the birds of India and the Indian subcontinent. Never before have so many of the region's species been illustrated in one book. The brilliant photographs--most of which appear here for the first time--have been carefully selected to show not only the most common Passerine and non-Passerine species, but also more elusive species and distinctive subspecies. An up-to-date distribution map and a unique code indicating frequency and global status are provided for each of the 668 species covered. The concise text provides vital information on habitats, habits, and voice to ensure accurate identification. Designed for easy use, the book places photos and maps in close proximity to provide an at-a-glance overview for each species. Birds are indexed by both their common and scientific names. This is an essential volume for all birdwatchers and wildlife enthusiasts as well as for anyone traveling to India, Nepal, Sri Lanka, the Maldives, Pakistan, Bangladesh, or Bhutan. Bikram Grewal has written more than twenty books on India, including three guides to its birds. He is a biodiversity expert for the Indian government. Bill Harvey is a lifelong birdwatcher who has lived throughout the Indian subcontinent. He published the first authoritative checklist on the birds of Bangladesh as well as numerous articles and is a cofounder of the Northern Indian Bird Network. Otto Pfister is a wildlife photographer whose work has appeared in numerous publications. He has also published several illustrated articles on birds. Gorgeous full-color photographs Distribution maps for all species Abundance icons Photographs, text, and maps in close proximity for at-a-glance overview Expert text aids species identification

Book Information

Series: Princeton Field Guides

Paperback: 520 pages

Publisher: Princeton University Press (February 2, 2003)

Language: English

ISBN-10: 069111496X

ISBN-13: 978-0691114965

Product Dimensions: 7 x 5 x 1 inches

Shipping Weight: 1.2 pounds

Average Customer Review: 3.0 out of 5 stars 4 customer reviews

Best Sellers Rank: #1,888,240 in Books (See Top 100 in Books) #15 in [Books > Travel > Asia > Bangladesh](#) #59 in [Books > Travel > Asia > Bhutan](#) #534 in [Books > Travel > Specialty](#)

Customer Reviews

This book is a very noble effort at a photographic field guide to Indian birds. Not surprisingly, the quality of the photos varies from excellent to marginal-at-best; a few species could not possibly be identified from the photos provided. Having said that, this book does contain several valuable features lacking from the other Indian bird guides. The range maps are displayed along with each species, with symbols and notes on the relative rarity of each species. Another very nice feature is the inclusion of the older, common (English) names which is great for those who have birded in India for awhile. I also like the smaller size and portability of this book. The bottom line: if you are going to take one bird field guide to India, I wouldn't take this one- the Grimmett/Inskipps or Kazmeirczak "non-photo" guides are better bets. However, if you are a serious birder and don't mind packing two bird books, I'd highly recommend taking this one along to supplement the information in the other field guides.

THE BASICS:softcover, 750+ color photos of medium size show 668 species of the subcontinent; multi color range maps show the entire regionTHE REVIEW:Princeton has put out a few books that follow this same photo guide format. It should be noted this book is not a complete guide. It shows only 668 (45%) of the region's nearly 1,500 species. However, this book does illustrate more species than any other single photo-book available for the subcontinent. Most of the birds are shown with a single color photo. About 10% of the birds have two photos.The selection of photos is good for 85-90% of the birds. These photos show the bird in good light and in the open for a clear view. Some of these birds are displayed a bit small but generally well enough to be identified. The remaining 10-15% of the photos are of low quality. These are often too small, too dark, too grainy, too obscured, or too indistinct to allow proper identification of the bird. Some photos appear to be included merely because it was the only photo immediately available. Since most of the birds have only one photo which is often of the adult male, this book won't be helpful for immature birds, various races, or many of the females.Each of the birds receive a 1-2 short paragraphs of text that cover description, voice, and habits. The description, composed of 8-12 short lines, takes up about half of the text. These descriptions offer some details but are not in-depth enough to reliable for identifying many of the similar species. The section on habits covers habitat preference and some behavioral notes. The voice is generally described in 2-4 short lines.Each bird receives the same map of the Indian subcontinent (Pakistan, India, Nepal, Bhutan, Bangladesh, and Sri Lanka),

containing two colors: Red for resident or breeding summer visitor and blue for non-breeding winter visitor. The ranges shown for the birds artificially stop at the political boundaries of these countries and do not show where the birds range might normally occur outside the area. Will this book be useful for a trip to India or the adjacent countries? Yes, but keep in mind the limitations that (a) less than half the species are shown and (b) only one of the plumages is shown. For a birding trip to India, you'll want to use one of the complete field guides, a couple of which are very good. Use this photo guide to help prepare for your trip and then rely on an illustrated guide for your field excursions. The books by Rasmussen or by Grimmett are superior to this. -- (written by Jack at Avian Review with sample pages, August 2008)

wORTH aVOIDING - BAD PICTURES (A FEW GOOD) NO MATCH FOR THE INSKIPP - NOT A GUIDE BUT A PICTURE BOOK

The book helped me to identify one bird I saw in Pakistan which I tried in other books.
