Holistic Management, Third Edition: A Commonsense Revolution To Restore Our Environment

Synopsis

Fossil fuels and livestock grazing are often targeted as major culprits behind climate change and desertification. But Allan Savory, cofounder of the Savory Institute, begs to differ. The bigger problem, he warns, is our mismanagement of resources. Livestock grazing is not the problem; it's how we graze livestock. If we don't change the way we approach land management, irreparable harm from climate change could continue long after we replace fossil fuels with environmentally benign energy sources. Holistic management is a systems-thinking approach for managing resources developed by Savory decades ago after observing the devastation of desertification in his native Southern Rhodesia (now Zimbabwe). Properly managed livestock are key to restoring the world's grassland soils, the major sink for atmospheric carbon, and minimizing the most damaging impacts on humans and the natural world. This book updates Savory's paradigm-changing vision for reversing desertification, stemming the loss of biodiversity, eliminating fundamental causes of human impoverishment throughout the world, and climate change. Reorganized chapters make it easier for readers to understand the framework for Holistic Management and the four key insights that underlie it. New color photographs showcase before-and-after examples of land restored by livestock. This long-anticipated new edition is written for new generations of ranchers, farmers, eco- and social entrepreneurs, and development professionals working to address global environmental and social degradation. It offers new hope that a sustainable future for humankind and the world we depend on is within reach.

Book Information

Paperback: 552 pages

Publisher: Island Press; 3 edition (November 10, 2016)

Customer Reviews

"Exceptionally well written, impressively informed and informative, thoroughly
'reader-friendly' in organization and presentation,Ã A Holistic Management: A
Commonsense Revolution to Restore Our EnvironmentÃ A will prove to be a practical and
invaluable informational resource for ranchers, farmers, eco-and social entrepreneurs, and
development professionals working to address global environmental and social degradation."
(Midwest Book Review)"[This book] should be on your bookshelf and read and reread until every
aspect of this concept is like taking a breath of airÃçâ –â •automatic. You will profit, your land will
profit, and the world in general will profit." (Small Farm Today)

A long-awaited update to Allan SavoryÃçâ –â,,çs paradigm-changing work in managing agricultural
resources.Ã A

I'd like

This new edition of Allan Savory's original masterpiece has been 30 years in the making. No one,
but no one offers a more in-depth and solution-oriented view to our planetary plague of
desertification and soil degradation than Allan Savory and Jody Butterfield. This is a "MUST READ
AND HEED" manual for not only restoring the health of our beleaguered environment, but for saving
our own species from itself. The antithesis of reductionist thinking, Savory supplies fully supported
science and widespread evidence for a fully practical, systematic and actionable (and surprisingly
simple) means of restoring vital natural systems and literally reversing decades of environmental
destruction, worldwide. We have the technology to implement all of this literally TODAY. It is the
ultimate environmental manifesto offering literally "grassroots" empowerment toward a future where
there can be abundant nourishment for millions in alignment with our human evolutionary and
genetic heritage, while also saving the environment. Holistic Management also realistically promises
the abundant and healthy restoration of otherwise dwindling water sheds, ecosystem diversity, richly
restored soil and plant life in ways that can help restore political and social stability in otherwise
impoverishedÃ regions. What is needed is the widespread grass roots will to make it happen...and
this book supplies the ultimate inspiration and How To! I cannot recommend this book urgently
enough!

There is hidden treasure in this book. If you are someone who wants human life to continue on
planet earth, who loves the diversity of many forms of larger life, like elephants, elk, eagles, squid,

salmon, redwoods, chimps, grasslands, strawberries, horses, kitties and kale and the many forms of microscopic, tiny and small life forms they (and we) feed and depend upon; to continue to populate our sphere in the heavens. If you like to eat or still believe it might be possible for humans to thrive in harmony with nature and each other - There is treasure in this book. Allan Savory may be the simple man he claims to be but driven by his love of wildlife and an unwavering commitment to its survival far into the future, and possessing a mind that probes, and questions again, he gets to the bottom of things. He has the courage to follow and tell the truth about what he has discovered even when the search reveals discoveries that turn the course of his life. He and Jody Butterfield have once again come forth with a book, updated, streamlined, sharing the insights that form a foundation for sound decision-making. Decision making that will allow all humans, who want life to thrive, to take the practical actions necessary to accomplish that mission. You can start from where you are. If you want to create a peaceful, prosperous, healthy, thriving whole of a self, a family, a business, an organization, community or whole of humanity and have not read this book the time to get started is now. If you farm, ranch, manage land, advocate for the environment, live in a city or town, vote, parent, manage a business, create policy, teach children and you have not read and understood what Savory presents in clear understandable language, you as a caring person, activist, expert, enthusiast may inadvertently be doing more harm than good. Don't take my word for it, you can look yourself at what Allan has discovered and articulated about humans in relationship with the forces of nature. Try his insights on for size, test and test again his ideas and perceptions. Give your mind, heart, imagination, observation skills, critical thinking, permission to play with his observations and insights as you look at your own life and the world around you. I've been doing it for over 20 years. Because nature is the amazing and complex way it is, the life-enhancing possibilities only get richer.

This book gives a clear explanation of the concepts of holistic management and the science of grassland restoration. The book definitely challenges some long-held assumptions about how and why ecosystems change over time. It is a must-read for all land managers, but anyone can benefit from the concepts of holistic management.

He's the foremost expert. His interviews about thinning elephant herds and how wrong he was is amazing. He's now trying to show that we're smarter now than we ever thought we could be on this topic...nature led the way...mimicking it rarely disappoints. Simply put, he shows that humans aren't smarter than mother nature...he's stopped trying to out think nature and has since learned embrace

it.

This is one of those seminal earth shaking books of which I've only read a few in my lifetime. It has restored my hope and faith in the future of humanity on earth. We can turn our world into a true garden of Eden if we change our thinking and management to become Holistic. A must read for.... well everybody!

A great book that is full of wisdom, information and hope that extends into all aspects of life on our planet. I highly recommend it to anyone who respects our environment and would like legitimate, lasting improvement to whatever it is that they are managing.
